**Date:** January 21, 2026

**Re:** Addendum 01 to the RFP for Consultant Engineering Design Services

**Project Name & Number:** Boiler Upgrades – P80121

**Project Location:** Eugene/Springfield Water Pollution Control Facility (WPCF)  
410 River Avenue, Eugene, Oregon 97404

This addendum is for the purpose of correcting minor errors and/or omissions in the RFP document and for providing answers to questions received from potential proposers as follows:

- The date of the final Technical Memorandum listed in Section 1.4 of the RFP document is corrected to December 3, 2025
- The specification divisions listed under Section 3.2 of the RFP document, Subsection D, paragraph 50% Design Submittal are corrected to Divisions 11, 22, 23, 26, 40, and 46
- The following questions were asked from potential proposers and are accompanied by their respective answers in **bold**:
  - The last paragraph of section 1.3 states, "This project is anticipated to begin in early summer 2026 and extend through 2027, ...." Do you anticipate this to be the period of time for design with construction extending beyond 2027? **The goal of the MWMC is to complete construction by the end of 2027**
  - Last item on page 18 of the RFP - "Review existing design documents to add a flare to the biogas system for possible incorporation into this project. May require coordination with another design consultant." Do you have more information on this design? Any reports or design deliverables would be helpful. **We do have design documents for this project and have posted them to the RFP webpage.**
  - Are graphics/tables subject to the 11-point font restriction? **Graphics are not subject to the 11-point font restriction, but textual tables are subject to that restriction. Please bear in mind that graphics are included in the 12 page content restriction.**

  
Matt Dapkus, MWMC Project Manager
